1. The drawings were received on 4/14/08. These drawings are accepted.
2. The disclosure is objected to because of the following informalities: There doesn't appear to be any brief description of each of the drawings as amended, i.e. 2A and 2B.

Appropriate correction is required.

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 1,2,4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Daiwa JP '333 or Ogawa et al JP '627 in view of Dakara, JPI Journal Vol 28 no9, Matsuka et al JP '715 and Kano et al JP '417, all cited by applicants.

Both Daiwa and Ogawa et al teach a threaded metal container with the 28mm diameter, thickness and angle claimed in claims 1 and 4 (see paragraphs 45-50). The larger 38mm diameter is known in metal containers as taught by Dakara as reflected in the tables as it the thread pitch claimed in claim 2. The thread number is also considered to be suggested by Daiwa and Ogawa et al. In any event such is known as taught by Matsuka et al and Kano et al. With regard to the height the examiner adopts the reasoning set forth in the reports for application 2002-381111 that given the mouth diameter, thickness and angle taught by either Daiwa or Ogawa et al using formula F1. The resultant height would fall within that claimed by applicants. Therefore it would have been obvious to one of ordinary skill in the art given the parameter taught by the references.

5. Claims 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over the references as applied to claim 1 above, and further in view of Nixon '875.

To have further make the height of the first thread lower in the thread section than another thread in a predetermined angle to relieve stresses in the thread and for ease of application of a cap would have been obvious in view of Nixon.

6. Applicant's arguments, see page 8 of the amendment, filed 4/14/08, with respect to the objection to the drawings and declaration have been fully considered and are persuasive. The objection to the drawings and of the declaration has been withdrawn. Claim 3 has been canceled.

7. Applicant's arguments with respect to claim 1-9 have been considered but are moot in view of the new ground(s) of rejection. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the seal) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

8. The following are suggested formats for either a Certificate of Mailing or Certificate of Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence concerning this application or proceeding to establish a date of mailing or transmission under 37 CFR 1.8(a). The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.
